

# Badger

**GMS**  
MINE REPAIR & MAINTENANCE

**DIESEL OR ELECTRIC!**

The GMS electric- or diesel-powered Badger is a robust, remote-operated, excavation and utility machine, that is nimble and compact enough to access areas too precarious or difficult to reach for a traditional skid steer or dozer. Underground examples include excavation in narrow or low areas, and under conveyors. Above ground, typical uses include highwall bench cleaning and remediation, or culvert and confined space cleaning.

With optional attachments that allow you to drill, hammer, spray, cut or carry, the Badger is also extremely versatile!

A single operator remains at a safe distance with enhanced sight lines, and an exhaust catalyst reduces emissions (diesel), making the Badger as safe as it is efficient!

#### SPECIFICATIONS

- PA B.O.T.E. Certified
- Weight: 5,000 lbs base machine
- Two-speed crawler track drive
- 4,500 lbs rated lift capacity (at boom pins)
- LED high-intensity lights
- On-board fire suppression system
- High visibility safety strobe lights
- 50 hp (diesel or electric)
- Profile: 43"W x 30"H x 104"
